

AHMAD ARAFAT

AI Engineer

+962796427591 ahmad2004arafat@gmail.com
[LinkedIn](#) [Website](#) [Github](#) Amman, Jordan

SUMMARY

AI Engineer specializing in Machine Learning, Deep Learning, and NLP, with hands-on experience fine-tuning LLMs and building hybrid RAG systems. Proficient in Python, SQL, and Azure, with a track record of delivering production-grade AI solutions end-to-end

SKILLS

AI & Machine Learning

Computer Vision | Large Language Models (LLMs) | Hybrid Retrieval-Augmented Generation (RAG) | Model Fine-Tuning (Unsloth) | Neural Networks | Predictive Modeling

Data Science & Analytics

Feature Engineering | Statistical Analysis | Exploratory Data Analysis (EDA) | Anomaly Detection

Programming Languages

Python | R | JavaScript | SQL | C++ | C#

Frameworks & Libraries

React | Node | Pandas | NumPy | Matplotlib | Seaborn | TensorFlow | PyTorch | Spacy | NLTK | BeautifulSoup

Cloud & Data Visualization

Microsoft Azure | Tableau | Power BI | Looker Studio

Tools & Methodologies

Git/GitHub | Agile Project Management | API Integration | Web Scraping

EXPERIENCE

AI Agent Engineering Trainee

MetaServ.Me | Remotely

11/2025 - 02/2026 Amman, Jordan

Developed autonomous AI agents with LLM and hybrid RAG architectures to improve response quality and retrieval performance.

- Developed autonomous AI agents with LLMs and hybrid RAG architectures to improve response accuracy and retrieval efficiency.
- Fine-tuned open-source models with Unsloth to improve training efficiency and lower memory usage for specialized tasks.
- Worked in an Agile team to design and deploy scalable AI features that met technical requirements and delivery deadlines.

Advanced Data Analytics Trainee

Correlation One | Remotely

10/2024 - 03/2025 Remote (United States)

Analyzed large datasets with SQL and Python to uncover actionable insights and deliver clear, stakeholder-ready reporting through interactive dashboards.

- Analyzed complex datasets with SQL and Python to perform exploration data analysis and identify key patterns, trends, and anomalies.
- Built interactive dashboards in Tableau and Power BI to turn raw data into clear, decision-ready insights for stakeholders.
- Applied data cleaning and feature engineering techniques to improve dataset quality and strengthen machine learning model performance.

EDUCATION

Bachelor of Computer Science / Artificial Intelligence

Middle East University

2022 - 2026 Amman, Jordan

- Expected Graduation: 2026
- RELEVANT COURSEWORK: Deep Learning, Machine Learning, Computer Vision, Data Science & Advanced Analytics, Knowledge base system, Robotics, Database Management Systems

PROJECTS

- [Computer Vision Research: SAS - Sentinel Aerospace System](#)
- [UniAI - Multilingual University Assistant](#)
- [EEG Signal Analysis & Anomaly Detection](#)
- [Autonomous Robotics/IoT Integration Project](#)
- [Crime Analytics](#)
